

Case study

Relaxation in color: With a user-friendly concept, The House of Elemis Spa creates a comfortable atmosphere for its customers

For the complete renovation of the Eleemis skincare brand's London spa, the lighting designers at Into Lighting worked with Virgile + Partner as lead designers to choose a relaxing, user-friendly concept with excellent technical support.

The new digital lighting system makes use of indirect light to create a sensual and calm atmosphere in the lounge areas and treatment rooms. A 2,700 K color temperature was chosen in order to bathe the rooms in an inviting, warm-white light. All the furniture and fittings were highlighted by flexible LINEARlight Colormix Flex LED strips.

Color therapy is one of the services Eleemis offers, so a homogeneous color-changing system was integrated in the treatment room ceiling rafts. These high-quality long-life LED strips are truly flexible – they are not only easy to bend and cut, but can also be installed and connected quickly. Using the EASY Color Control and EASY Hybrid Remote devices matched to the LED strips, the Eleemis Spa therapists can easily set up the required lighting scene – without disturbing their customers.

Bringing light to your product

The advent of LEDs in the lighting industry has created unlimited freedom in light source design, thus enabling luminaires that have been unthinkable before. With our comprehensive portfolio of light engines and modules, our competence in lighting and uncompromised quality, we make our customers more successful in their businesses.

AC, DC, linear, square and round shapes, high-power, mid-power and low-power LED packages – the possibilities to create a light source seem endless. On the one hand, this provides the perfect opportunity to escape from the rigid boundaries of conventional lamps. However, on the other hand, this also creates new challenges: Matching the market needs for sustainable product propositions with fast-paced LED technology development.

Managing the technical changes required to keep a luminaire attractive over its entire production lifetime involves regular development efforts, e.g. component updates and qualification. These tasks increasingly bind valuable resources that are needed to innovate and stay competitive. We strive to support our customers by a smart component strategy to limit the effort for future product updates.

Easy to choose, easy to use

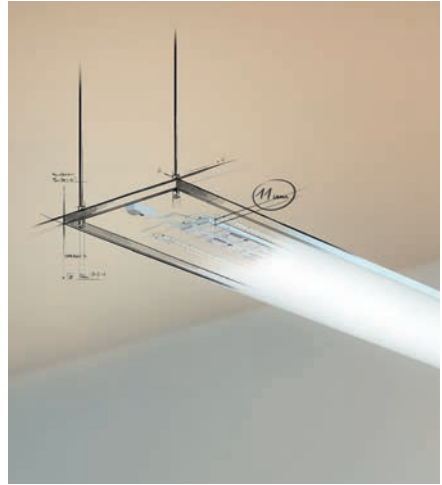

In addition to our existing performance-oriented products, we offer our customers economic alternatives. Therefore, our new portfolio provides an even wider range of products featuring increased flexibility and continuation for the changing requirements of luminaire projects:

PrevaLED® – our performance offer: exceptional performance with a comprehensive set of choices.

Basic – the economical alternative: attractive performance levels meet market standards with the reassurance of OSRAM quality.

We invite you to explore our product portfolio on the following pages. Our standard offer covers a wide range of applications and features smart solutions for outstanding products. But as we understand that every luminaire project is different, we also offer a customized approach to co-develop with you the component needed. Challenge us!

In combination with our LED drivers and LMS components, we offer system solutions that provide all the confidence and flexibility you need to stay focused on your business: **Delight your customers with the right product.**

Linear Light Engines – Summary of portfolio

Linear PrevaLED® modules

Switching to LED pays off, more and more with each passing day

The portfolio of linear LED modules is characterized by high quality and reliability as well as outstanding photometric properties. In a wide variety of applications, the modules demonstrate that, today, the switch to modern LED technology is as easy as it gets.

PrevaLED® Linear LED modules are sustainable solutions for linear lighting with state-of-the-art LED technology and a great alternative to traditional lamps. They provide efficient and high-quality light for the illumination of offices, shops, retail and industrial facilities.

From cost-efficient to highly efficient – a well-thought-out linear portfolio

Our product range for linear lighting solutions not only includes highly efficient LED modules but also cost-efficient alternatives, and thus opens up a variety of application possibilities for each luminaire type.

PrevaLED® Linear Tunable White

Biologically effective light

PrevaLED® Linear Tunable White is designed as a light engine that can be flexibly used for Tunable White/Human Centric Lighting (HCL) applications. It is used in recessed, surface-mounted and pendant variants or in floor-standing luminaires for almost all applications in offices, schools, health facilities or industrial areas.

Dynamic light for enhanced well-being

The range includes an LED module that delivers warm white light (2,700K) and cold white light (6,500K). In combination with light management systems, it offers dynamic light scenarios such as brightness sequences or different color temperatures in the range between 2,700 and 6,500K, thus simulating the course of natural daylight. At the location of the application, this type of dynamic light can have a positive impact on well-being and productivity.

What would a Tunable White light engine be without a driver or light management? Of course, the light engine is perfectly matched to the OPTOTRONIC® TW LED drivers. These can execute DALI DT8 for Tunable White/HCL applications as well as 2 x DALI DT6, e.g. direct/indirect lighting. A comprehensive light management range is the perfect complement to the application in terms of Tunable White/HCL. Whether for pure Tunable White applications with DALI DT8 (e.g. DALI MCU TW) or smaller as well as large HCL applications (e.g. DALIeco BT (RTC) or DALI PROFESSIONAL), OSRAM offers you the optimal solution for every application.

Product benefits

- Tunable White by adjustable color temperature from 2,700 K to 6,500 K
- Non-isolated LED module with perfect match to 2-channel OPTOTRONIC® TW driver
- Cut-out area for shadow-free wiring
- High homogeneity thanks to tight LED pitch

PrevaLED® Linear G4

Highly efficient, powerful, versatile

PrevaLED® Linear G4 is characterized by its very high efficiency of up to 200 lm/W. This high-end lighting solution offers a wide range of light colors and lengths within the Zhaga LED module portfolio.

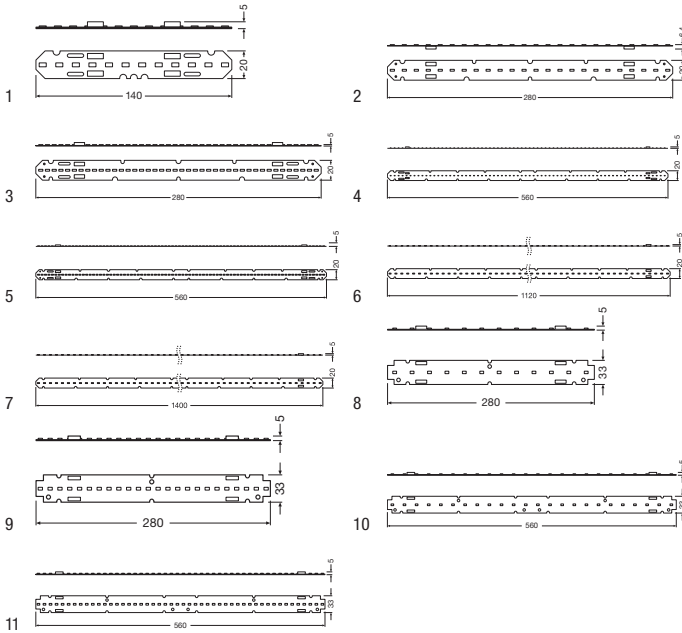

The champion for the widest range

PrevaLED® Linear G4 is mainly used in solutions for industrial and office lighting. The LED modules with high luminous flux, for example, provide the powerful light needed for high-bay luminaires. LED modules with a length of 1,120 mm or 1,400 mm can be integrated easily into trunking systems and provide reliable lighting for production sites.

For office lighting projects, such as pendant or louver luminaires, surface-mounted or floor-standing luminaires, PrevaLED® Linear G4 offers unlimited possibilities. The product portfolio provides the widest range of light colors – from 2,700 K to 3,000 K, 4,000 K and 5,000 K to 6,500 K. Moreover, the portfolio not only features a color rendering index of $CRI \geq 80$ but also an excellent color rendering index of $CRI \geq 90$ and thus offers the highest levels of light quality.

PrevaLED® Linear G4 is matched to a broad range of OPTOTRONIC® Linear LED drivers – for SELV as well as non-isolated, DALI or on/off, programmable or non-programmable. It is therefore ready for universal use.

PrevaLED® Linear G4-P

The all-rounder among the LED modules

No matter for what type of luminaire, whether for pendant, surface-mounted and recessed luminaires in offices or trunking systems and high-bay luminaires in industrial applications, the PrevaLED® Linear G4-P LED module is the right choice when it comes to high-quality luminaire applications that focus both on economy and market-compliant efficiency.

Many luminaires, one answer

PrevaLED® Linear G4-P is tuned to exactly meet the market requirements for efficiency/cost and is used in all common luminaire designs for office and industrial

applications. We will continue to follow the efficiency/cost path with the upcoming product generations and thus ensure a future-proof solution.

The PrevaLED® Linear G4-P portfolio is suitable for both SELV and non-isolated operation. The advantage: Only one LED module for SELV and non-SELV luminaires.

Like all LED modules from OSRAM, PrevaLED® Linear G4-P is perfectly matched to the entire family of OPTOTRONIC® Linear LED drivers – for SELV as well as non-isolated, DALI or on/off, programmable or non-programmable.

Basic Linear G2

Economy as the key to success

For a variety of lighting applications that focus on economy, the Basic Linear G2 LED module has proven to be the right choice. Basic Linear G2 is primarily used in damp-proof or batten luminaires in car parks, storage rooms or corridors, which require high volumes.

Easy mounting, variable use

Basic Linear G2 is designed for lumens per euro, without missing out on good light quality and performance. Luminaires with a length of 1.2 m, in particular, can be retrofitted to LED in no time at all with the 1,120 mm long LED module.

To fully highlight the economy, the product family Basic Linear G2 is completely matched to the cost-efficient OPTOTRONIC® FIT D or ELEMENT driver families. Thanks to the flexible driver choice, the application the luminaire is meant for can definitely be implemented.

¹⁾ Modules perfectly matched to OSRAM OPTOTRONIC® LED drivers (see relevant table) / For current photometric data and important safety, installation and application information, see www.osram.com/led-systems/. All the technical parameters apply to the entire module. In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values / In development, data preliminary

Product features¹⁾

- Module efficacy: up to 153 lm/W
- Average lifetime (L70 B50): 50,000 h (temperature at T_p = 55 °C)
- Available with luminous flux: 1,100 lm on 280 mm
- Available with luminous flux: 1,550 lm, 2,200 lm on 560 mm
- Available with luminous flux: 4,400 lm on 1,120 mm
- Available with color temperature: 3,000 K or 4,000 K
- High initial color consistency: ≤ 3 SDCM
- CE marked

Product benefits

- Slim module for design of narrow luminaires
- Illumination comparable to that of reflector luminaires
- SELV or non-SELV module for easy luminaire design
- System match with OSRAM driver portfolio

Areas of application

- Underground carpark
- Industry (storage, warehouse)
- Suitable for indoor applications

Installation hints and tips

Current distribution across LED modules connected in parallel

In the past, the wiring of conventional lamps used to be specified in advance: Lamps were either directly connected to the mains supply or there was a specific terminal pair available on the driver for each lamp. Today, state-of-the-art LED technology not only enables a larger variety

of possible applications, but also provides various options for the connection of modules and drivers to enable the ideal combination of constant-current drivers and LED modules. However, new challenges arise at the same time and perfect circuitry is more important than ever before.

Top: Measuring set-up with driver and modules without diffuser

Center: Real photo

Bottom: Luminance image in false color representation with single-side power supply

Right: Scale of the luminance image

The figure above shows a sample set-up with 12 PrevaLED® Linear units connected in parallel to an OTi DALI 80/220...240/2A1 LT2 L. Together, all the modules have an overall length of 3.36 meters. The false color representation clearly shows that the first module directly connected to the driver looks significantly brighter than the last module. This can lead to disturbing brightness jumps, for example when using

a light strip where the luminaires installed are flush with each other. In this example, power is supplied from one side and is looped through the individual modules. In this context, single-side power supply means that the plus and minus terminals on the same module side are used. This is illustrated once again in the following schematic representation.

Schematic representation – “single-side power supply”

Equivalent circuit diagram – single-side power supply

Source: Luminous Flux and Current Uniformity Analysis in Linear LED Modules
Ming Li^a, Keng Chen^a, Arnulf Rupp^b, Daniel Chu^a & Divya Vangari^a

^a OSRAM Sylvania, Inc., Danvers, Massachusetts, USA

^b OSRAM Licht AG, Garching, Germany

The figure above shows an equivalent circuit diagram of the set-up. The parasitic resistances shown in the equivalent circuit diagram correspond to the unavoidable resistances of the lines, conductors and transition resistances on the terminals. These resistances add up depending on the number of modules and due to the

voltage drop on each module, the voltage decreases from one module to the next. For this reason, the current supplied by the driver cannot be distributed homogeneously across all LED modules – and the brightness level differs from module to module.

Top: Real photo

Bottom: Luminance image in false color representation with crossover power supply

Right: Scale of the luminance image

The figure above shows the same set-up, but with different wiring. All the modules achieve almost the same brightness level. This is due to the fact that the positive terminal is connected to one side of the

modules connected in parallel and the negative terminal is connected to the other side. The following schematic representation illustrates this connection principle.

Schematic representation – “crossover power supply”

Equivalent circuit diagram – crossover power supply

Source: Luminous Flux and Current Uniformity Analysis in Linear LED Modules Ming Li^a, Keng Chen^a, Arnulf Rupp^b, Daniel Chu^a & Divya Vangari^a

^a OSRAM Sylvania, Inc., Danvers, Massachusetts, USA

^b OSRAM Licht AG, Garching, Germany

The figure on the previous page shows the equivalent circuit diagram of this connection principle. When looking at the current flow through the modules in the equivalent circuit diagram (orange and bright orange lines) and adding up the parasitic resistors, the total resistance per module is $3 \times R_{seg}$. This ensures that the current supplied by the driver is evenly distributed across all the LED modules.

The problem of uneven current distribution across LED modules connected in parallel especially concerns luminaires with Safety Extra-Low Voltage (SELV), because the currents are higher and the voltages are

lower. If the LED modules are consistently connected in series, each module is supplied with the same current and the problem described cannot occur.

Last but not least, it should be noted that a difference in brightness within a ready-manufactured luminaire can also be caused by other conditions such as incorrect module installation, inequalities or the contamination of reflectors and diffusers. Furthermore, other chemical impacts on the LEDs through the use of improper materials or caused by the environment etc. are also possible.

PrevaLED[®] Area G4

Light in a square

The LED module PrevaLED[®] Area G4 is ideally suited for area luminaires such as the widely used troffer luminaire. With only two LED modules, conventional luminaires are retrofitted to LED in the twinkling of an eye.

Easy luminaire integration

The LED pitch is very small, which ensures a homogeneous illumination. PrevaLED[®] Area G4 is a SELV-only module and is perfectly matched to the OPTOTRONIC[®] SELV driver family. Luminaire integration is therefore quick and comfortable.

A very high efficiency of up to 178 lm/W, a high lumen package of 5,000 to 7,000 lumens and a choice of light colors of 3,000 K or 4,000 K provide the right light in a wide variety of applications.

Basic Area G1

Ideal for cost optimization

For troffer luminaires that focus on economy and do not require a module efficiency higher than 150lm/W, Basic Area G1 is just the right thing.

Basic Area G1 offers the same photometric properties as its big brother PrevaLED® Area G4. The only difference is a lower module efficiency of up to 150lm/W.

Homogeneous illumination

Basic Area G1, which is available in the light colors 3,000 K and 4,000 K, is also characterized by its very small LED pitch, which ensures a homogeneous illumination in all applications of troffer luminaires.

PrevaLED[®] Bar

The LED module among the trunking systems

With its three-row LED arrangement on the circuit board, the light engine PrevaLED[®] Bar is particularly suited for trunking systems, which are used, for example, in supermarkets or for shop & retail.

Retail applications

In terms of light quality, PrevaLED[®] Bar has excellent properties as the three-row LED arrangement reduces the luminance and therefore the glare.

PrevaLED[®] Bar is perfectly matched to optics that are currently available on the market (e.g. Lediil[®] or Carclo[®]). Thus, the assembly of a professional trunking system becomes as easy as it gets. You have the choice between the light colors 3,000 K, 4,000 K and 6,500 K, for a 280 mm as well as a 560 mm long LED module.

PrevaLED[®] Bar is suitable for operation with SELV as well as non-isolated drivers. Rest assured that you will find the right driver for your application.

- Quick and easy mounting thanks to plastic holder
- High transmission by diffuse optic
- High transmission by transparent optic

PrevaLED® Core G7

Smaller dimensions, larger selection, higher efficiency

Today, spotlights and downlights are becoming ever smaller and more efficient – but are expected to serve an even larger spectrum of applications. Whether in general lighting, shop lighting or special applications: The components must be suitable for use in a family of luminaires. The new product design of the PrevaLED® Core G7 enables optimized luminaire designs due to reduced loss of luminous flux. With its particularly low OCA height (Optical Contact Area) of just 3.5 mm and its small LES (Light-Emitting Surface) of only 10 mm or 15 mm, the reflector can be positioned very close to the light source and enables an improved light coupling and beam control. Both of these are ideal prerequisites for designing luminaires that feature optimized lighting technology and smaller overall dimensions.

Benefit from an extended range of LED modules for spotlights and downlights

We offer a very large spectrum of power ranges, color temperatures and light qualities:

- 1,000, 2,000, 3,000 or 5,000 lm
- 2,700, 3,000, 3,500 or 4,000 K
- CRI > 80 or > 90
- Food colors: Meat, fish, bread or fruit and vegetables
- Fashion colors: White for clothing in brilliant colors and high contrast

Depending on the application, we recommend the combination of PrevaLED® Core G7 with our LED driver families OT FIT LT2 S and OT FIT CS G2 for an optimal OSRAM system solution. More details can be found in the chapter “LED drivers” and at www.osram.com/ds.

¹⁾ Modules perfectly matched to OSRAM OPTOTRONIC® LED drivers (see relevant table) / For current photometric data and important safety, installation and application information, see www.osram.com/led-systems / All the technical parameters apply to the entire module. In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values

Product features¹⁾

- Complete portfolio with varying luminous flux, color temperature, color rendering
- Available with color temperature: 2,700 K, 3,000 K, 3,500 K or 4,000 K
- High module efficacy: up to 168 lm/W at T_p = 65 °C
- CE marked
- Lifetime (L80/B10): 60,000 h (temperature at T_p = 65 °C)

Product benefits

- Easy integration thanks to very compact form factor
- Easy cooling due to optimized efficiency and high maximum operation temperature
- High driver flexibility allows cost-effective and intelligent systems
- 5-year guarantee

Areas of application

- Spotlighting in shops and retail
- Down- and wall lighting in offices, corridors, meeting rooms, workplaces
- Decorative and functional lighting in hospitality, hotels, restaurants
- Functional lighting in public and commercial buildings

¹⁾ For current photometric data and important safety, installation and application information, see www.osram.com/led-systems / All the technical parameters apply to the entire module. In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values

Product features¹⁾

- LED light engine with integrated driver
- Light-emitting surface, diameter, mounting holes positioning according to Zhaga Book 3
- Poke-in wire connection (no special connector required)
- Available with luminous flux: 800 lm, 2,000 lm
- System efficacy: up to 94 lm/W
- Color temperature: 2,700 K, 3,000 K or 4,000 K
- Color rendering index R_a; typ. 83
- Maximum housing temperature: 80 °C at T_c point
- Initial color consistency: ≤ 3 SDCM
- Power factor: > 0.95

Product benefits

- Connect directly to 220...240 V AC mains voltage for class 1 luminaires
- No external driver required
- Easy efficiency upgrade from generation 1 modules due to unchanged form factor
- Enables very high degree of freedom in luminaire design
- Allows very compact luminaire designs

- Less complexity in logistics as no external driver or special cables are required
- Enhanced safety thanks to protective cover glass and reversible thermal shutdown
- Easy to integrate due to compatibility with Zhaga Book 3 heat sinks and reflectors
- Chip-on-board technology with great homogeneity, no diffuser required
- 5-year guarantee

Areas of application

- Spot lighting in shops
- Down- and wall lighting in offices, corridors, meeting rooms, workplaces
- Decorative and functional lighting in the hospitality industry
- Accent lighting

PrevaLED® COIN

Light is reliable: Quickly connect to the LED age

There are a number of reasons why the PrevaLED® COIN 50 and PrevaLED® COIN 111 are very popular choices. Both products combine effortless and quick installation with easy operation with OSRAM drivers, long lifetime, high reliability and an amazing level of efficiency. Moreover, PrevaLED® COIN is highly flexible due to the easy replacement of the modules.

Both products have a broad range of application possibilities from attractive product presentation in shops and malls to beautiful illumination of exhibits in galleries or museums to spot lighting, e.g. in retail stores.

They are also simple solution replacements for MR16 and AR111 form factors with light, optics and heat sink. They offer:

- Best luminous efficacy in combination with OPTOTRONIC® constant-current ECG
- Easy and quick design-in for luminaire manufacturers
- High luminous flux packages
- Perfect replacement for existing lamps
- Excellent appearance
- Quick and comfortable initial installation

¹⁾ Modules perfectly matched to OSRAM OPTOTRONIC® LED drivers (see relevant table) / For current photometric data and important safety, installation and application information, see www.osram.com/led-systems/ All the technical parameters apply to the entire module. In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values

Product features ¹⁾

- Consistent white light: ≤ 3 SDCM
- Color rendering index R_a: > 80 and > 90
- Luminous flux: 980...1,500 lm (model-dependent)
- Beam angle: 15° (on demand), 24°, 40°

Product benefits

- Compact design
- Compatible with conventional MR16 lamps
- High color temperature consistency throughout the whole module
- Complying with IES TM30
- Multi-shadow-free illumination thanks to single light source
- 5-year guarantee

Areas of application

- Retail outlets
- Shop lighting
- Restaurants
- Hospitality
- Museums, galleries

Product features¹⁾

- Fits into most existing traditional MR16 luminaires
- Available with 24° or 40° beam angle
- Versions with different luminous fluxes and different color temperatures available
- Cable length: 500 mm, suitable for 1.6 mm²/AWG 22 wires
- Color rendering index R_a: typ. 92 or typ. 83 (depending on version)
- Module efficacy: up to 112 lm/W
- High color consistency: 4 SDCM
- Temperature at T_p point (according to IEC 62717): 75 °C
- Maximum temperature at T_c: 95 °C (according to IEC 62717)
- Lifetime (L70/B50): 50,000 h (temperature at T_c = 75 °C)

Product benefits

- Best luminous efficacy in combination with OPTOTRONIC® constant current ECG
- Easy and quick design-in for luminaire manufacturers
- High luminous flux
- Easy installation thanks to wiring with only two cables
- 5-year guarantee

Areas of application

- Shops
- Display cabinet lighting
- Shelf lighting
- Elevators
- Hospitality, hotels, restaurants
- Corridors

¹⁾ For current photometric data and important safety, installation and application information, see www.osram.com/led-systems/ All the technical parameters apply to the entire module. In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values.

Product features¹⁾

- Integrated driver, heat sink and lens optics
- Fits into most existing traditional MR16 luminaires
- Available with 24°, 40° or 60° beam angle
- Versions with different luminous fluxes and different color temperatures available
- Dimmable (with suitable phase-cut dimmers)
- IP44-protected module
- Lifetime (L70/B50): 35,000 h (temperature at T_c = 73 °C)

Areas of application

- Shop lighting
- Shopping centers
- Exhibition halls
- Museums

In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values

Product features¹⁾

- Type of protection IP65 according to DIN EN 60529
- The modules can only be connected in series
- Two-core connecting cable (500 mm)
- Dimmable

Product benefits

- Metal package for optimum heat removal
- Integrated M10x1.5 thread for simple installation
- No additional heat sink required
- Narrow beam angle for use as a spot source
- Perfect centering thanks to flange on the floor of the casing (diameter 12 mm)
- Low maintenance costs thanks to a lifetime of up to 70,000 h
- 5-year guarantee

Areas of application

- For accent, orientation or route lighting
- Shelf and furniture lighting
- Suitable for outdoor use

PrevaLED[®] Flat AC G2

© Stefan Müller, Berlin

Simple and flat design for intelligent luminaires

Our PrevaLED® Flat AC G2 system provides an all-in-one solution to create flat and highly diffuse wall-mounted and ceiling-mounted luminaires. The popular project uses are in functional or decorative areas in hospitality or office applications.

PrevaLED® Flat AC G2 light engines provide several specific benefits:

- Only a small design-in effort is needed (integrated system solutions).
- Energy savings and an attractive application design can be achieved by using sensor technology.
- They provide high performance in terms of efficiency and quality of light.
- A touch protect accessory allows for safe operation in luminaires that can be opened by the end user.

The PrevaLED® Flat AC G2 series is available in 5 different versions:

- PC version PL-FLAT-AC-PC: Includes driver on board, phase cut dimmable
- Emergency version PL-FLAT-AC-EM: Emergency lighting for single battery systems and also for central battery system
- Master version PL-FLAT-AC-MA: Includes HF sensor and ambient light sensor as well as MA/SL control
- Slave version PL-FLAT-AC-SL: To be connected to the Master version for corridors up to 35 m in length
- DALI version PL-FLAT-AC-DA: Fully dimmable and DALI-compatible

In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values

Product features¹⁾

- Dimmable (with suitable phase-cut dimmers)
- Designed for wall and ceiling luminaires with diffuse light distribution
- Low-cost LED replacement of CFL wall and ceiling luminaires
- Driver integrated on LED board
- Available diameter: 170 mm, 240 mm
- Available with color temperature: 3,000 K or 4,000 K
- Available with luminous flux: 1,500 lm, 2,500 lm, 3,300 lm

Product benefits

- Touch protection accessory for simple use in luminaires
- High reliability
- Easy to use
- Optimized design for simple thermal management
- Enables thin and efficient luminaire designs
- High quality of light thanks to low modulation
- 5-year guarantee

Areas of application

- Corridors
- Stairways
- Landings
- Hallways

¹⁾ For current photometric data and important safety, installation and application information, see www.osram.com/led-systems / All the technical parameters apply to the entire module. In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values

Product features¹⁾

- Master with integrated RF sensor (motion, dimming, auto off at daylight)
- Master/Slave system with up to 11 luminaires and up to 5 Masters
- Designed for wall and ceiling luminaires with diffuse light distribution
- Low-cost LED replacement of CFL wall and ceiling luminaires
- Driver integrated on LED board
- Available diameter: 170 mm, 240 mm
- Available with color temperature: 3,000 K or 4,000 K
- Available with luminous flux: 1,500 lm, 2,500 lm

Product benefits

- Touch protection accessory for simple use in luminaires
- High reliability
- Easy to use
- Optimized design for simple thermal management
- Enables thin and efficient luminaire designs
- High quality of light thanks to low modulation
- 5-year guarantee

Areas of application

- Corridors
- Stairways
- Landings
- Hallways

Installation hints and tips

How to use the PrevaLED® Flat AC G2 Master/Slave system

I) Introduction

Take advantage of our “all-in-one device” PrevaLED® Flat AC with integrated driver on board for your extremely flat designs in large and standard-diameter luminaires with diffusers. The module creates a very homogeneous light. The optional functions

cater to all requirements for corridors and circulation areas, including emergency lighting and additional energy saving thanks to motion sensing. Our current and recently expanded PrevaLED® Flat AC portfolio comprises four diameters/lumen packages:

Please note:
Master/Slave devices are currently only available in 170 mm and 240 mm diameter.

II) Typical application topics with focus on PrevaLED® Flat AC G2 Master/Slave system

Our PrevaLED® Flat AC G2 Master/Slave system saves our customers money because one Master device (incl. HF motion detection sensor) can be combined with up to 10 Slave devices, which are much less expensive. Thus, a cost-efficient total set-up of 11 luminaires per system (and up to 5 Masters) is possible. One Master/Slave system can cover a maximum corridor length of approximately 35 meters. Tips for proper implementation when using more than one Master device:

1) Wiring: Master-Slave (MA/SL) – Multi-Master systems

The wiring of a PrevaLED® Flat AC G2 Master/Slave system is simple: One Master is connected directly to the mains (→ Master-in terminal), which makes this Master the main Master of the system. All other devices, such as Slaves or further Masters, must be connected to the Master-out connector of the main Master (see following picture on the following page).

Further Masters operate as sub-Masters when connected to the output of the main Master. Please never connect the Master-out connector to the mains voltage as this destroys the device.

The available OSRAM YouTube™ video below shows the correct Multi-Master wiring as well as the operating mode of a PrevaLED® Flat AC G2 Master/Slave system: www.osram.com/prevalflatms

2) MA/SL multi-system set-up

For corridor applications longer than 35 meters, a set-up of multiple MA/SL systems may be appropriate. These stand-alone systems are triggered separately and work independently to save as much energy as possible as well as costs.

3) Functionality overview: main Master vs. sub-Master

Identification of Master and sub-Master/s in existing installations:

The main Master can be identified by the fact that the entire system dims down when any button on the Master (see point 4: “A”, “H” or “L”) is pressed (= commissioning mode). A sub-Master can be identified by the fact that only the light engine dims down when any of its buttons is pressed.

Operation of a PrevaLED® Flat AC G2 Master/Slave system comprising two or more Masters:

All PrevaLED® Flat AC G2 Masters of a system have the same functionality as, for example, PrevaLED® Flat AC G2 HF and also support the Master functionality.

The setting of the following parameters, however, is not possible on any sub-Master and the corresponding menu levels cannot be addressed:

– **Hold time**

The hold time of the system can only be adjusted on the main Master. When pressing the “hold time” button on a sub-Master, its display continuously shows “0”.

– **Corridor function**

The corridor function can only be activated on the main Master. When trying to activate the corridor function on a sub-Master, the corresponding menu level is disabled.

– **Luminaire mode**

A sub-Master cannot be set in luminaire mode. The corresponding menu level is disabled.

– **Teach-in mode for ambient light threshold**

The teach-in function cannot be activated on a sub-Master. The relevant menu level “6” is not accessible in this case.

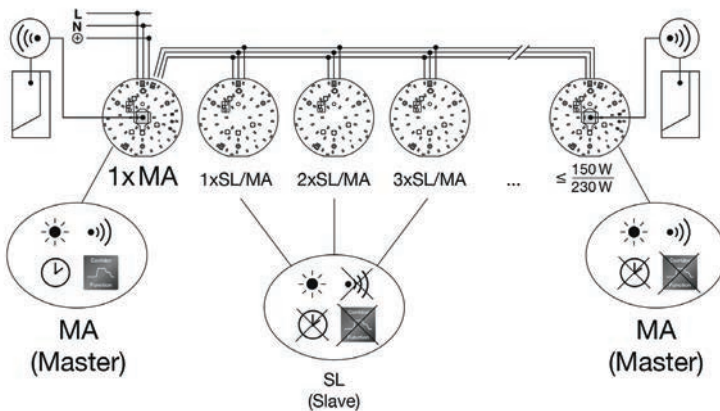

– **Deactivation of motion detection**

If motion detection is deactivated on the main Master, all light engines operate as on/off modules. If motion detection is deactivated on a sub-Master, this operates as a Slave (motion detection deactivated).

In the “off” state, all Masters continuously measure their ambient light level, and the sub-Masters send the appropriate information to the main Master. When the corridor function is activated, the light engine never switches off, and light measurement is automatically and permanently deactivated.

The main Master and all sub-Masters continuously monitor whether a motion occurs inside their detection area. Whenever a low light level is measured on one of the Masters and motion is detected anywhere in the system, the light is switched on. Low light level measurement and motion detection must not necessarily be in the same position. If the ambient light measurement is deactivated on one or more Master light engines, all ambient light levels are ignored and the system turns the lights on as soon as motion is detected in the system.

Please do a quick functionality check of the main Master, Slaves and sub-Master by referring to the picture below:

4) User interface and commissioning functions

The picture on the right shows the positions of the buttons for commissioning.
 (If you press any button to switch to commissioning mode, the luminaire dims immediately down to 5% to avoid glare.)

An installed PrevaLED® Flat AC G2 Master/ Slave system works with the standard factory settings. For more information on user-specific settings of the interface for the PrevaLED® Flat AC G2 MA version, please refer to the cockpit chart below, which shows the various commissioning functions as well as the factory settings:

OSRAM	A Button "Area"	H Button "Hold time"	L Button "Light level threshold"
MAIN MENU <small>(push 1 s)</small>	DETECTION AREA	HOLD TIME	DAYLIGHT THRESHOLD
Parameter/Display	A	H	L
Level	0 off 1 10% 2 25% 3 50% 4 75% 5 90% 6 100% (100% = approx. 3.5 meters conical detection range; for ceiling applications: Up to 10 meters height)	0 1s 1 10s 2 30s 3 60s 4 3min 5 5min 6 10min 7 15min	0 off 1 -5 lux 2 -50 lux 3 -100 lux 4 -300 lux 5 -500 lux 6 taught value (level 6 only available after first teaching via "teach mode")
SUB-MENU <small>(push > 3 s)</small>	LUMINAIRE MODE	CORRIDOR FUNCTION	TEACH MODE
Parameter/Display	E	C	P
Level	0 Luminaire mode enabled 1 Luminaire mode disabled F FACTORY RESET By pressing the button "Area" and "H" "hold time" simultaneously for 3 seconds → the display shows "F"	0 100% (hold time) → 10% (10s) → 0% 1 100% (hold time) → 10% 2 100% (hold time) → 10% (Xs = "H") → 0%	0 off 1 Light will remain "on" for 1 minute (display shows a blinking "P"). Light will turn "off" for 1 s. Daylight value will be measured now and saved as new threshold. Light will return to 100%.

© 2017 Subject to change without notice. Errors and omissions excepted.

III) Did you know?

Additional tips & tricks

The best diffuser distance depends on the material characteristics of the diffuser and can differ from use case to use case. Different or unknown materials can influence the behavior of the HF sensor (e.g. reflecting rays can disturb the sensor). Before you use your own cover, we recommend that you carry out tests to ensure the correct functioning of the HF sensor.

If, for example, a ceiling fan is also installed and moves around during this two-minute calibration process, this device will be detected not as a movement but as “permanent disturbance” or general environment.

To ensure a certain standard of quality, the HF sensor is subjected to a 100 % functionality test in every device. Every PrevaLED® Flat AC G2 device with HF sensors is tested after production.

General HF sensor calibration function:

Once turned on, the antenna signal evaluation function measures the disturbance spectrum of the environment. This can take up to two minutes.

During this calibration process, the module can “flash” again if it detects a movement that is “not present”. If the permanent disturbance spectrum of the luminaire environment changes, the changed environmental conditions are triggered again during the calibration process. (That is why the PrevaLED® Flat AC G2 device may be “flashing”, and this calibration mode takes up to two minutes.) This is a built-in advantage to ensure a long-term unrestricted, optimal functioning of the sensor.

IV) Bonus

For more technical and application-related topics, visit our website and download the Application Guide now.

You can find more information on our PrevaLED® Flat AC G2 light engine family on our website.

For our PrevaLED® Flat AC G2 phase cut version, a dimmer compatibility overview is available on request.

Here is a short overview of the the five different versions of PrevaLED® Flat AC G2:

- **PC (phase cut) version**
PL-FLAT-AC-PC
Includes driver on board
- **Emergency light version**
PL-FLAT-AC-EM
Includes C-EM (central battery) and L-EM (local battery) function
- **Master version PL-FLAT-AC-MA**
Includes HF sensor and ambient light sensor, C-EM and L-EM function and MA/SL control
- **Slave version PL-FLAT-AC-SL**
To be connected to the Master version
- **DALI version PL-FLAT-AC-DA**
Fully dimmable and DALI-compatible, includes C-EM and L-EM function

Flexible LED strips – Summary of portfolio

Find the perfect solution to every customer's need with the Flex portfolio

Freedom of design with LINEARlight FLEX® LED strips

LINEARlight FLEX® LED strips are the best choice for representative and prestigious applications, enabling the design of professional and durable lighting solutions.

OSRAM provides highest-quality shop lighting solutions for almost any project and application. You can create just the right effect to highlight products perfectly or to gently guide people through a shopping mall with our extensive product portfolio of dynamic Tunable White, high CRI, shop whites and more.

Set the stage for brilliant products, avoid yellowish effects, maintain vivid colors and make vegetables, cheese and meat appear delicious with the right special white LED strip.

Sophisticated lighting projects require a strong connection between architecture, function, light and a perfect interaction between daylight and artificial light. OSRAM provides an ideal solution with the white, Tunable White and RGBW LINEARlight FLEX® LED strips.

OSRAM LINEARlight FLEX® RGB and RGBW provide vivid colors with full single binning for homogeneity and ensure that the pure white and color consistency are maintained throughout large installations and over time.

Our monochromatic versions offer excellent color stability and enable the possibility to have solid colors without the need of a control system. Diffused colors are also available.

Effective solutions with VALUE Flex® LED strips

Create the desired lighting atmosphere, set decorative accents, or highlight products: in the blink of an eye with the new generation of the OSRAM VALUE Flex® LED strips. Thanks to improved features, you can design homogeneous lighting with just the right amount of light in a wide range of color temperatures.

VALUE Flex® LED strips bring homogeneous light into narrowest coves and perfectly illuminate every space with a large selection of various light colors.

The product family not only offers lumen packages from 300 to 2,400 lm/m with an efficacy of up to 140 lm/W. Thanks to

VALUE® Flex, OSRAM provides even more options for various applications: just the right solution for comfortable ambient lighting as well as brightly illuminated rooms. The new ShortPitch versions are available as protected (IP66) and non-protected LED strips (IP20): simply ideal to create homogeneous lighting solutions.

Combined with ON/OFF ELEMENT LED drivers, dimmable OTi DALI LED drivers, protected OPTOTRONIC® devices and our extended range of connectors, tracks and covers, you can design the ideal lighting solution for every need.

Shaping light – realize your own design

Design by Astrid Krogh
(www.astridkrogh.com)

OSRAM provides the possibility to customize flexible LED strips and realize unique projects. Determine the desired design and functionality and we will manufacture suitable high-quality LED strips.

We offer many possibilities, including custom-made solutions, in addition to our standard portfolio:

- Longer length reels for automated processing
- Private or personalized labels and marking
- Special light colors
- Semi-finished assemblies
- Extended performances and warranty

We can help in creating the right product to fit any need. OSRAM experts are always available to support you in making the best choice between various possible solutions. We accelerate your design-in activity thanks to our extensive knowledge and well-equipped, certified laboratories. We offer high-quality and reliable products made in Italy and we count on our "Quality First" culture.

For further information, please contact flex-support@osram.com.

¹⁾ Modules perfectly matched to OSRAM OPTOTRONIC® LED drivers (see relevant table) / For current photometric data and important safety, installation and application information, see www.osram.com/led-systems/. All the technical parameters apply to the entire module. In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values / In development, data preliminary / More versions available on request

Product features¹⁾

- Flexible and cuttable LED strip
- Luminous flux: up to 3,000 lm/m
- Module efficacy: up to 138 lm/W
- Dimmable with PWM technology
- Fine White (3 SDCM)
- 45,000 mm reel

Product benefits

- Large selection of light colors
- Great design freedom thanks to flexibility and cuttability of module
- Simple mounting and connection
- Toolless connection with the optional CONNECTSystem
- Easy mounting on many smooth surfaces thanks to self-adhesive tape at the back
- High luminous flux
- Extraordinary design and high-quality materials
- Type of protection: IP00

Areas of application

- Architecture lighting
- Cove lighting
- Ceiling integration

Equipment/Accessories

- Simplified connection with optional matching CONNECTSystem
- Quick installation with optional track system (OSRAM Flexessories®)
- Perfectly matched to OPTOTRONIC® 24 V electronic control gears

1) Modules perfectly matched to OSRAM OPTOTRONIC® LED drivers (see relevant table) / For current photometric data and important safety, installation and application information, see www.osram.com/led-systems/ All the technical parameters apply to the entire module. In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values
 2) Pre-soldered wires 500 mm long on one end / In development, data preliminary

Product features¹⁾

- Flexible and cuttable LED strip
- Luminous flux: up to 3,800 lm/m
- Adjustable color temperature via Tunable White: 2,700...6,500 K
- Adjustable color temperature via Tunable White: 2,200...3,500 K
- Adjustable color temperature via Tunable White: 2,400...3,500 K

Product benefits

- Simple mounting and connection
- Toolless connection with the optional CONNECTsystem
- Easy mounting on many smooth surfaces thanks to self-adhesive tape at the back
- High luminous flux
- Extraordinary design and high-quality materials
- Pre-soldered wires (TWW versions)

Areas of application

- Cove lighting
- Shop lighting
- Offices

Equipment/Accessories

- Simplified connection with optional matching CONNECTsystem
- Quick installation with optional SLIM TRACK System
- Perfectly matched to OPTOTRONIC® OTI DALI 50/220...240/24 TW
- Perfectly matched to OPTOTRONIC® OTI DALI 80/220...240/24 TW

¹⁾ Modules perfectly matched to OSRAM OPTOTRONIC® LED drivers (see relevant table) / For current photometric data and important safety, installation and application information, see www.osram.com/led-systems/ / All the technical parameters apply to the entire module. In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values

Product features¹⁾

- Flexible and cuttable LED strip
- Luminous flux: up to 3,850 lm/m
- Module efficacy: up to 133 lm/W
- Dimmable with PWM technology
- Fine White (3 SDCM)
- High CRI versions: typical average value 95

Product benefits

- Single bin technology for very good color consistency over time and space
- Large selection of light colors
- Large selection of white tones
- High luminous flux suitable for general lighting
- “Shop White” versions available for great color rendering without yellowing effect
- Great design freedom thanks to flexibility and cuttability of module
- Extraordinary design and high quality materials
- Simple mounting and connection
- Toolless connection with the optional CONNECTsystem
- Easy mounting on many smooth surfaces thanks to self-adhesive tape at the back

Areas of application

- Cove lighting
- Ceiling integration

Equipment/Accessories

- Simplified connection with the optional CONNECTsystem
- Quick installation with optional track system (OSRAM Flexessories®)
- Perfectly matched to OPTOTRONIC® 24 V electronic control gears

²⁾ Applicable on smallest operable unit

Product features¹⁾

- Flexible and cuttable LED strip
- Special white light optimized for red meats
- Fine White (3 SDCM)
- Available luminous flux: up to 2,000 lm/m

Product benefits

- Makes fresh foods more attractive
- Simple mounting and connection
- Toolless connection with the optional CONNECTsystem
- Easy mounting on many smooth surfaces thanks to self-adhesive tape at the back

Areas of application

- Fresh food counters
- Special purpose LED strip for fresh food counters lighting
- Suitable for red meat
- Not suitable for general lighting

Equipment/Accessories

- Simplified connection with optional matching CONNECTsystem
- Quick installation with optional track system (OSRAM Flexessories®)
- Perfectly matched to OPTOTRONIC® 24 V electronic control gears

In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values

²⁾ Applicable on smallest operable unit

Product features¹⁾

- Flexible and cuttable LED strip
- Fine White (3 SDCM)
- Available luminous flux: up to 2,000 lm/m

Product benefits

- Makes fresh foods more attractive
- Prevents “yellowing” appearance of white-colored foods
- Simple mounting and connection
- Toolless connection with the optional CONNECTsystem
- Easy mounting on many smooth surfaces thanks to self-adhesive tape at the back

Areas of application

- Fresh food counters
- Special purpose LED strip for fresh food counters lighting
- Suitable for white meat, fish, cheese and vegetables
- Not suitable for general lighting

Equipment/Accessories

- Simplified connection with optional matching CONNECTsystem
- Quick installation with optional track system (OSRAM Flexessories®)
- Perfectly matched to OPTOTRONIC® 24 V electronic control gears

LF800S-G3-865-10 ¹⁾	120	120	A+ ²⁾	8	1	

¹⁾ Modules perfectly matched to OSRAM OPTOTRONIC® LED drivers (see relevant table) / For current photometric data and important safety, installation and application information, see www.osram.com/led-systems/. All the technical parameters apply to the entire module. In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values.
²⁾ Applicable on smallest operable unit

Product features¹⁾

- Flexible and cuttable LED strip
- Luminous flux: up to 850 lm/m
- Module efficacy: up to 99 lm/W
- Dimmable with PWM technology
- Fine White

Product benefits

- Very small LED spacing
- Great design freedom thanks to flexibility and cuttability of module
- Simple mounting and connection
- Toolless connection with the optional SLIMCONNECT system G2
- Easy mounting on many smooth surfaces thanks to self-adhesive tape at the back

Areas of application

- Edge coupling
- Small coving
- Path lighting
- Contour accent lighting
- Signage
- Advertising and lettering

Equipment/Accessories

- Simplified connection with optional matching SLIMCONNECT system G2
- Quick installation with optional track system (OSRAM Flexessories®)
- Perfectly matched to OPTOTRONIC® 24 V electronic control gears

1) Modules perfectly matched to OSRAM OPTOTRONIC® LED drivers (see relevant table) / For current photometric data and important safety, installation and application information, see www.osram.com/led-systems / All the technical parameters apply to the entire module. In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values

2) Color binning / With RGB wavelengths: R/G/B 625/525/465 nm

3) Color binning / With RGB wavelengths: R/G/B 625/525/465 nm / White point binning

4) Full single bin on white and each color / With RGB wavelengths: R/G/B 622/534/485 nm

5) Applicable on smallest operable unit

Product features¹⁾

- Flexible and cuttable LED strip with inline multichip RGB LEDs
- RGBW: full single bin on each color and white

Product benefits

- Uniform color changing
- Great design freedom thanks to flexibility and cuttability of module
- Simple mounting and connection
- Type of protection: IP00
- Toolless connection with the optional CONNECTsystem for RGB
- Easy mounting on many smooth surfaces thanks to self-adhesive tape at the back

Areas of application

- Effect lighting in architecture
- Injection of light into displays and low-profile light guides
- Dynamic effects in public zones

Equipment/Accessories

- Simplified connection with optional matching CONNECTsystem for RGB
- Quick installation with optional track system (OSRAM Flexessories®)
- Perfectly matched to OPTOTRONIC® 24 V electronic control gears

²⁾ Applicable on smallest operable unit

Product features¹⁾

- Flexible and cuttable LED strip
- Luminous flux: up to 3,000 lm/m
- Type of protection: IP67
- Dimmable with PWM technology
- Fine White (3.5 SDCM)

Product benefits

- High luminous flux
- Great design freedom thanks to flexibility and cuttability of module
- High-performance silicone for extremely long life and flexibility
- Simple connection thanks to premounted connectors
- Extraordinary design and high quality materials
- Toolless connection only if using the optional CONNECTsystem
- Easy mounting on many smooth surfaces thanks to self-adhesive tape at the back
- Outdoor use possible: UV and salt mist resistant (UV acc. to ISO 4892-2 – Method A, salt mist acc. to IEC 60068-2-52 severity 1)

Areas of application

- Facade accent lighting
- Ceiling integration
- Wall integration
- Cove lighting
- Machine lighting
- Path lighting
- Suitable for outdoor use

Equipment/Accessories

- Simplified connection with optional matching CONNECTsystem
- Quick installation with optional track system (OSRAM Flexessories®)
- Perfectly matched to OPTOTRONIC® 24 V electronic control gears

LFP800S-G3-880-10 ¹⁾	120	120	A+	8	1

¹⁾ Modules perfectly matched to OSRAM OPTOTRONIC® LED drivers (see relevant table) / For current photometric data and important safety, installation and application information, see www.osram.com/led-systems/ All the technical parameters apply to the entire module. In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values

Product features¹⁾

- Flexible and cuttable LED strip
- Luminous flux: up to 810 lm/m
- Type of protection: IP67
- Dimmable with PWM technology
- Fine White (3.5 SDCM)

Product benefits

- Very small LED spacing
- Outdoor use possible: UV and salt mist resistant (UV acc. to ISO 4892-2 – Method A, salt mist acc. to IEC 60068-2-52 severity 1)
- Great design freedom thanks to flexibility and cuttability of module
- High-performance silicone for extremely long life and flexibility
- Simple connection thanks to premounted connectors
- Extraordinary design and high quality materials
- Easy mounting on many smooth surfaces thanks to self-adhesive tape at the back

Areas of application

- Suitable for outdoor use

Equipment/Accessories

- Simplified connection with optional matching CONNECTsystem
- Quick installation with optional track system (OSRAM Flexessories®)
- Perfectly matched to OPTOTRONIC® 24 V electronic control gears

²⁾ Applicable on smallest operable unit

Product features¹⁾

- Flexible and cuttable LED strip
- Luminous flux: up to 420 lm/m
- Type of protection: IP67
- Dimmable with PWM technology
- Fine White (3.5 SDCM)
- Salt mist proof

Product benefits

- Very long for seamless bands of light
- Great design freedom thanks to flexibility and cuttability of module
- High-performance silicone for extremely long life and flexibility
- Simple connection thanks to premounted connectors
- Extraordinary design and high quality materials
- Toolless connection with the optional CONNECTsystem
- Easy mounting on many smooth surfaces thanks to self-adhesive tape at the back

Areas of application

- Cove lighting
- Wall integration
- Hand rails and corridors
- Machine lighting
- Path lighting
- Signage
- Suitable for outdoor use

Equipment/Accessories

- Simplified connection with optional matching CONNECTsystem
- Quick installation with optional track system (OSRAM Flexessories®)
- Perfectly matched to OPTOTRONIC® 24 V electronic control gears

¹⁾ Modules perfectly matched to OSRAM OPTOTRONIC® LED drivers (see relevant table) / For current photometric data and important safety, installation and application information, see www.osram.com/led-systems/ All the technical parameters apply to the entire module.

In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values

²⁾ Applicable on smallest operable unit

Product features¹⁾

- Diffused light lines without visible spots
- Flexible and cuttable module to support design freedom
- Long operational length per single power feed possible (up to 6 m)
- Ideal for luminaire designs
- Extra strong self-adhesive back for easy mounting
- 24 V technology for easy dimensioning
- Recommended in system use with OPTOTRONIC®
- Increased reliability due to single-piece reel-to-reel technology
- Dimmable with PWM technology

Product benefits

- IP67 protection with high-performance silicone
- Outdoor use possible: UV and salt mist resistant (UV acc. to ISO 4892-2 - Method A, salt mist acc. to IEC 60068-2-52 severity 1)

Areas of application

- Individual and customized luminaires
- Organic-shaped luminaires
- Architectural integration – e.g. coves, walls
- Object integration – e.g. handrails
- Signage and illuminated advertising

1) Modules perfectly matched to OSRAM OPTOTRONIC® LED drivers (see relevant table) / For current photometric data and important safety, installation and application information, see www.osram.com/led-systems/ / All the technical parameters apply to the entire module. In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values

2) Applicable on smallest operable unit

Product features¹⁾

- Available with light color: Warm White, Cool White
- Luminous flux: up to 1,600 lm/m
- High color consistency: 4 SDCM
- Self-cooling
- Beam angle per module: 120°
- Dimmable with suitable OPTOTRONIC® LED drivers
- Type of protection: IP00

Areas of application

- Hospitality
- Signage
- Architecture lighting
- Cove lighting
- General illumination
- Wall integration
- Display cabinet lighting

Product benefits

- Energy-saving low-power flexible LED strip
- Pre-wired LED strip, simple and quick plug-and-play installation
- Good light output due to homogeneous LED distance and high color consistency
- Easy mounting on many smooth surfaces thanks to self-adhesive tape at the back
- Easy installation with optional track system
- Easy to cut and reconnect to the reliable SLIMCONNECT system

Equipment/Accessories

- SLIMCONNECT system FLEX connector
- Optional track system
- ELEMENT LED drivers
- OPTOTRONIC® LED drivers

¹⁾ Modules perfectly matched to OSRAM OPTOTRONIC® LED drivers (see relevant table) / For current photometric data and important safety, installation and application information, see www.osram.com/led-systems/ / All the technical parameters apply to the entire module. In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values

²⁾ Applicable on smallest operable unit

Product features¹⁾

- Available with light color: Warm White, Cool White
- Luminous flux: up to 310 lm/m
- High color consistency: 4 SDCM
- Self-cooling
- Beam angle per module: 120°
- Dimmable with suitable OPTOTRONIC® LED drivers
- Type of protection: IP00

Areas of application

- Hospitality
- Under-cabinet lighting
- Shelf lighting
- Decorative lighting

Equipment/Accessories

- SLIMCONNECT system FLEX connector
- Optional track system
- ELEMENT LED drivers
- OPTOTRONIC® LED drivers

Product benefits

- Energy-saving low-power flexible LED strip
- Pre-wired LED strip, simple and quick plug-and-play installation
- Easy mounting on many smooth surfaces thanks to self-adhesive tape at the back
- Easy installation with optional track system
- Easy to cut and reconnect to the reliable SLIMCONNECT system

¹⁾ Modules perfectly matched to OSRAM OPTOTRONIC® LED drivers (see relevant table) / For current photometric data and important safety, installation and application information, see www.osram.com/led-systems/ All the technical parameters apply to the entire module. In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values

²⁾ Applicable on smallest operable unit

Product features¹⁾

- Available with light color: Warm White, Cool White
- Luminous flux: up to 950 lm/m
- IP66 protection
- High color consistency: 4 SDCM
- Beam angle per module: 120°
- Dimmable with suitable OPTOTRONIC® LED drivers

Product benefits

- Energy-saving low-power flexible LED strip
- Pre-wired LED strip, simple and quick plug-and-play installation
- Good light output due to homogeneous LED distance and high color consistency
- Easy mounting on many smooth surfaces thanks to self-adhesive tape at the back
- Easy installation with optional track system
- Protection against the ingress of water according to IP66
- Multi-cutttable LED strip with SLIMCONNECT system G2

Areas of application

- Wet or damp areas
- General illumination
- Hospitality
- Display cabinet lighting
- Signage
- Architecture lighting
- Wall integration
- Suitable for outdoor use

Equipment/Accessories

- SLIMCONNECT system G2
- Optional track system
- ELEMENT LED drivers
- OPTOTRONIC® LED drivers

Complete every project with our Flexessories[®] range

Cover a wide range of applications with Flexessories[®]

Create tailored solutions with LINEARlight FLEX[®] LED modules for a great variety of different applications. Four different track systems (slim track, handrail track, wide track and edge lighting track) and further Flexessories[®] allow you to make your flexible LED solution complete and create a unique system that exactly meets your needs.

Do you know the OSRAM system guarantee?

We recommend always to use LED strips in combination with OSRAM OPTOTRONIC[®] constant-voltage LED drivers. With this system, we offer an extended system guarantee.

LED modules for light advertising and backlighting – Summary of portfolio

LED modules for illuminated signage and backlighting

LED modules are becoming ever more popular for the backlighting of buildings, for example for illuminated signage. The advantages are obvious. Compared to traditional lighting solutions using neon or T5/T8 fluorescent lamps, LED modules have longer lifespans and thus less service intervals. Significant energy costs can

be saved thanks to higher efficiency levels. With LEDs as point light sources combined with optics designed specifically for the application, highly homogeneous backlighting is achieved, offering a new level of design freedom. Colored LED modules can also be integrated into the application to positively intensify perception of the backlight object or building.

With an efficient complete system, OSRAM is setting standards in modern illuminated advertising. The range of services includes:

- BackLED® and BoxLED® modules with robust designs including high IP protection
- Wide range of module sizes: XS, S, M, L, XL and DS (double-sided)
- Wide range of colors: 3,000 K, 4,000 K, 6,500 K, red, green, blue, RGBW and TW (Tunable White from 2,700 K to 6,500 K)
- Homogeneous illumination and backlighting using OSRAM Flat Ray or Square Lens technology
- Mounting profiles for simple and rapid installation

LED deSIGNer

The LED deSIGNer is an online planning tool that allows you to calculate the required number of components. The new software leads you step-by-step to an optimal system of LED modules, LED drivers and accessories. You can then use the evaluations for your customer propositions. Calculate with us:

www.osram.com/led-designer.

¹⁾ Modules perfectly matched to OSRAM OPTOTRONIC® LED drivers (see relevant table) / For current photometric data and important safety, installation and application information, see www.osram.com/led-systems/ / All the technical parameters apply to the entire module. In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values

Product features¹⁾

- Connected with flexible cables
- Type of protection (modules): IP66
- Color rendering index $R_{a} > 80$
- CE marked and UL listed

Product benefits

- Uniform illumination at high LED pitches thanks to Square Lens technology
- Modules are compatible with BackLED® mounting profile
- Significantly better application efficiency compared to systems without lenses
- Several options for quick and simple mounting: bolting or snap-in
- Excellent module efficacy
- Very long lifetime
- 5-year guarantee

Areas of application

- Signage and illuminated advertising
- Backlighting of small and/or flat channel letters
- Backlighting of single and double-sided light boxes
- Permanent outdoor use in enclosed light boxes or channel letters

Equipment/Accessories

- BackLED® mounting profile BA-SM-MP
- Several types of OPTOTRONIC® 12 V power supplies available

In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values

Product features¹⁾

- Chain of 40 LED modules with three LEDs each
- Connected with flexible cables
- Variable LED module distance of 120..200 mm
- Very homogeneous backlighting with installation depth of 60 mm
- Dimmable with OT DIM, OT DALI DIM, OT DALI DIM LI
- Lifetime (L70/B50): 30,000 h (temperature at T_c = 70 °C)
- Color rendering index R_{ii}: > 80

Product benefits

- Type of protection IP64 thanks to full encapsulation of LED modules
- Illumination without hotspots with less modules, slim depths due to batwing optics
- Consistent white light (Standard Deviation of Color Matching SDCM: < 3)
- Completely molded housing protects PCB and LEDs
- Easier pre-mounting with double-sided tape with extra long foil
- 5-year guarantee

Areas of application

- Backlighting of medium-sized channel letters

Equipment/Accessories

- Optimized for operation with OPTOTRONIC® 12 V power supplies

Product name	Im MODULE	△	⊙	Module/ Chain	Ⓜ	Ⓜ	💡 No.
BA-M-PL 830 HO ¹⁾	86	155	3	40	B	5	1
BA-M-PL 840 HO ¹⁾	90	155	3	40	B	5	1
BA-M-PL 865 HO ¹⁾	90	155	3	40	B	5	1

¹⁾ Modules perfectly matched to OSRAM OPTOTRONIC® LED drivers (see relevant table) / For current photometric data and important safety, installation and application information, see www.osram.com/led-systems / All the technical parameters apply to the entire module. In view of the complex manufacturing process for light-emitting diodes, the typical values given above for the technical LED parameters are merely statistical values that do not necessarily correspond to the actual technical parameters of an individual product; individual products may vary from the typical values

Product features¹⁾

- Connected with flexible cables
- Type of protection (modules): IP66
- Color rendering index $R_a > 80$
- CE marked and UL listed
- Lifetime (L70/B50): 50,000 h
- Module efficacy: up to 101 lm/W

Product benefits

- Uniform illumination at high LED pitches thanks to Square Lens technology
- Modules are compatible with BackLED® mounting profile
- Significantly better application efficiency compared to systems without lenses
- Several options for quick and simple mounting: bolting or snap-in
- Consistent white light (Standard Deviation of Color Matching SDCM: < 3)
- ENEC certified
- 5-year guarantee

Areas of application

- Signage and illuminated advertising
- Backlighting of small and/or flat channel letters
- Backlighting of single and double-sided light boxes
- Permanent outdoor use in enclosed light boxes or channel letters

Equipment/Accessories

- BackLED® mounting profile BA-SM-MP
- Several types of OPTOTRONIC® 12 V power supplies available

Product features¹⁾

- Connected with flexible cables
- Type of protection (modules): IP66/IP68
- Special robust encapsulation
- CE marked
- Dimmable by pulse width modulation (PWM)

Product benefits

- Simple fixing with M3 screws
- Broad color mixing palette (in connection with light management systems)
- Uniform backlighting of large surfaces thanks to extremely wide angle optics
- Simple connection with open cable ends
- Consistent white light (Standard Deviation of Color Matching SDCM: < 5)
- 5-year guarantee

Areas of application

- Dynamic color backlighting
- Dynamic mood lighting
- Spas
- Shops
- Restaurants
- Trade fair lighting
- Permanent outdoor use in enclosed light boxes or channel letters

Equipment/Accessories

- Several types of OPTOTRONIC® 24 V power supplies available
- BoxLED® mounting profile BX-MP

Product features¹⁾

- Connected with flexible single-wire cables
- Cuttable after each single module
- Type of protection: IP20
- Color rendering index R_a: > 80
- CE marked

Product benefits

- Single-wire enables dimensionally stable shapes and curves
- Fully flexible in all directions
- LED pitch adjustable as required
- Extra-small engineered modules avoid shades, delivering great light uniformity
- White-painted modules on both sides, ensuring optimal reflection
- Very long lifetime: up to 50,000 h (L70/B50)

Areas of application

- Permanent outdoor use in potted full-acrylic block letters
- Signage and illuminated advertising
- Illumination of front, side or back light emitting letters

Equipment/Accessories

- Several types of OPTOTRONIC® 12 V LED drivers available

- Modules are compatible with BackLED® mounting profile
- Uniform illumination thanks to optimized elliptical lenses
- Several options for quick and simple mounting: bolting or snap-in
- Very high module efficacy: up to 106 lm/W
- Consistent white light (Standard Deviation of Color Matching SDCM: < 3)
- Very long lifetime: up to 50,000 h (L70/B50)
- ENEC certified
- 5-year guarantee

Areas of application

- Signage and illuminated advertising
- Illumination of single and double-sided light boxes

Equipment/Accessories

- Several types of OPTOTRONIC® 24 V power supplies available

Mounting profiles

Time and precision play an important role in light installations. Consequently, a quick mounting process, which is optimally supported by mounting profiles from OSRAM, is a proven means to reduce costs.

For installation, the LED modules are simply snapped into the profiles which are then bolted down with screws driven through pre-drilled mounting holes.

Thanks to the regular distances between the drill holes in the mounting profiles, the modules can be placed at even pitches without the need to measure. Within the profiles, however, they can be moved back and forth flexibly, as required.

The even arrangement of the modules therefore ensures a homogeneous illumination of the entire surface. Moreover, thanks to the strong aluminum profiles, the entire construction is very robust and maintenance-friendly.

Functions of the mounting profiles

1) Side injection (single-sided and double-sided)

2) Backlighting (single-sided)

3) Backlighting (double-sided)*

* Patent pending

Product features

- Universally applicable mounting profile for single or double-sided light boxes
- Overall length: 2,000 mm

Product benefits

- Can be easily shortened to any length
- Quick and easy mounting of the profile with self-tapping screws or pop rivets
- Quick and simple snap-in fixing of the LED modules, no tools required
- Robust aluminum profile

Areas of application

- Advertising and lettering
- Backlighting of single and double-sided light boxes

Equipment/Accessories

- BA-MP suitable for BackLED® L, BoxLED® XS
- BA-SM-MP suitable for BackLED® S/M

Product features

- Mounting brackets for BackLED® DS Plus mounting profile
- Shipping unit comprises equal quantity of left and right brackets

Product benefits

- Quick and simple snap-in fixing of the mounting profiles, no tools required
- Robust and corrosion-proof polycarbonate brackets

Areas of application

- Signage and illuminated advertising
- Backlighting of double-sided light boxes and pylons
- Permanent outdoor use in enclosed light boxes

Equipment/Accessories

- Suitable for BackLED® DS Plus

Control systems for Flex and signage modules

The OSRAM dynamic control system lets you create any possible comfortable ambiance whether you are working, meeting or relaxing. OSRAM offers several options to control the light in small and large projects – cabled and wireless.

Large projects (up to 255 light points)

Shopping mall

For large projects, we recommend solutions based on the DALI PROFESSIONAL Controller in combination with OTi DALI 1-4 CH and OTi DALI Tunable White. Manage the color change and tune the color temperature using the DALI PRO Control app.

DALI PRO CONT-4 controller

OTi DALI 80/220-240/24 1-4 CH

BackLED® Plus G15 RGBW

Medium-sized projects (up to 100 light points)

Hotel lobby

Our solution based on the OT Bluetooth Low Energy (BLE) minimizes the installation effort with a wireless system. It is intuitive to set up, along with the powerful control base from the app.

The Casambi solution is based on Bluetooth Low Energy, the state-of-the-art wireless technology and the only low-power wireless technology in all modern smartphones, tablets and even smart watches, making it the only mainstream and future-proof low-power radio technology in the world.

www.casambi.com

OT 50/220-240/24

OT Bluetooth Low Energy (BLE)

LINEARlight FLEX® POWER

Small projects (up to 25 light points)

Tunable White office solution

Our solution based on the DIM MCU TW and the OTi DALI TW is very convenient for single rooms with one single point of light control to tune the light temperature and intensity. It is easy to install and delivers a great result, giving you peace of mind.

OTi DALI 80/220-240/24

LINEARlight FLEX® POWER Tunable White

Flex and Signage: constant-voltage compatibility

System matching instructions:

1. Constant-voltage LED drivers can be 12V or 24V.
2. Control the 12V or 24V voltage required from the light engine (LED strip/signage module).
3. Estimate the required length for the final installation of the LED strip or signage module.
4. Verify the required power consumption of the light engine* and select the appropriate driver. All drivers in the OPTOTRONIC® range with the “Smart Power Supply” function are designed to compensate for the extra power required during the warm-up of the LED modules up to 20% of the nominal rated power to avoid flickering or any flux reduction. This intelligent control ensures constant light output for very low temperatures as well as high temperatures.

Example:

With 9 meters of LF1200-G3-827-09, a power consumption of 8.9 W/m → 80.1 W in 9 meters. The OPTOTRONIC® with “Smart Power Supply” will compensate for the extra 15% power required during the light-on phase.

Connect the LED strips with proper connectors or solder cables.

Important:

Be aware of electrostatic discharge (ESD) and wear ESD protection.

5. Connect the light engine to the drivers at 24V (+) and 0V (-).

* All values indicated on the datasheet (listed under each product on our website) refer to an ambient temperature of 20 °C. The power consumption of the light engine at a lower temperature is higher and has to be evaluated.

Contact flex-support@osram.com or signage-support@osram.com.
